

# Natural Join

Combine two relations into a single relation.

The tuples are joined if the attributes common to both relations are equal.

Which common attribute(s) are these relations joined on?

# Cartesian Product

This is the *cross product* of two relations.

Q. What is the *cross product* of  $\{a, b\}$  and  $\{c, d\}$ ?

A.  $\{a, b\} \times \{c, d\}$  produces  $\{(a, c), (a, d), (b, c), (b, d)\}$

The cross product produces *all possible pairs* of rows of the two relations.

Q. Can you see a *problem*?

A. If the two relations have attributes in common, how do we tell which relation each attribute is from?

# Cartesian Product Example

Relations  $r, s$ :

A	B
$\alpha$	1
$\beta$	2

$r$

C	D	E
$\alpha$	10	a
$\beta$	10	a
$\beta$	20	b
$\gamma$	10	b

$s$

$r \times s$ :

A	B	C	D	E
$\alpha$	1	$\alpha$	10	a
$\alpha$	1	$\beta$	10	a
$\alpha$	1	$\beta$	20	b
$\alpha$	1	$\gamma$	10	b
$\beta$	2	$\alpha$	10	a
$\beta$	2	$\beta$	10	a
$\beta$	2	$\beta$	20	b
$\beta$	2	$\gamma$	10	b

# Cartesian Product Common Attributes

Relations  $r, s$ :

$A$	$B$
$\alpha$	1
$\beta$	2

$r$

$\bar{B}$	$D$	$E$
$\alpha$	10	a
$\beta$	10	a
$\beta$	20	b
$\gamma$	10	b

$s$

$r \times s$ :

$A$	$r.B$	$s.B$	$D$	$E$
$\alpha$	1	$\alpha$	10	a
$\alpha$	1	$\beta$	10	a
$\alpha$	1	$\beta$	20	b
$\alpha$	1	$\gamma$	10	b
$\beta$	2	$\alpha$	10	a
$\beta$	2	$\beta$	10	a
$\beta$	2	$\beta$	20	b
$\beta$	2	$\gamma$	10	b

# Renaming Attributes

Allows us to refer to a relation, (say  $E$ ) by more than one name.

$$\rho_x(E)$$

returns the expression  $E$  under the name  $X$

Example.

Relations  $r$

$A$	$B$
a	1
b	2

$$r \times \rho_s(r)$$

$r.A$	$r.B$	$s.A$	$s.B$
a	1	a	1
a	1	b	2
b	2	a	1
b	2	b	2

# Union

Relations  $r, s$ :

For  $r \cup s$  to be valid.

1.  $r, s$  must have the *same arity* (same number of attributes)

2. The attribute domains must be *compatible*

i.e, 2<sup>nd</sup> column of  $r$  deals with the same type of values as does the 2<sup>nd</sup> column of  $s$ .

Q. Did you *expect* there to be 4 rows?

A	B
$\alpha$	1
$\alpha$	2
$\beta$	1

$r$

A	B
$\alpha$	2
$\beta$	3

$s$

A	B
$\alpha$	1
$\alpha$	2
$\beta$	1
$\beta$	3

$r \cup s$ :

# Difference

What would you expect them to be?

- Relations  $r$ ,  $s$ :

$A$	$B$
$\alpha$	1
$\alpha$	2
$\beta$	1

$r$

$A$	$B$
$\alpha$	2
$\beta$	3

$s$

  

$A$	$B$
$\alpha$	1
$\beta$	1

■  $r - s$ :

# Intersection

- Relation  $r, s$ :

$A$	$B$
$\alpha$	1
$\alpha$	2
$\beta$	1

$r$

$A$	$B$
$\alpha$	2
$\beta$	3

$s$

  

$A$	$B$
$\alpha$	2

- $r \cap s$

Note:  $r \cap s = r - (r - s)$
